ART METAL CEILINGS and METAL WALL LININGS

A known QUALITY

Wunderlich Embossed Steel Ceilings have maintained an unvarying reputation since the foundation of the Business in 1887.

TRADE MARK.

WUNDERLICH LIMITED, *Manufacturers.*

Drawing Room Ceiling. Design composed of Panels No. 1456 Suite. See page 15.

FOREWORD

THIS publication has been compiled to illustrate how aptly our various art metal ceiling units—diapers, panellings, moldings, cornices, &c., may be assembled to form diverse effects, pleasing to the eye and applicable to various classes of buildings. So much more interesting should this publication prove, on account of its display of fresh designs and treatments, arising out of development during the war period, when the necessarily restricted amount of new publicity matter gave us little scope to portray our latest ideas in a form that would eventually come under the notice of our clients. However, a wide selection of our latest and best creations is herein presented, and we feel that a careful perusal of these pages will be followed by a measure of surprise that so great a variety of effects is available in Wunderlich Art Metal.

Fortunately, our supplies of raw material—at times restricted during the war years—are now ample for all requirements ; accordingly, the most distant country client and our neighbour in the next metropolitan suburb, alike, may now select the materials for any desired treatment, in the quantities required, with the certainty that the finished work, with the exercise of a little thought and care in its erection, will be the equal of the handsome effects we illustrate in these pages.

The artistic, hygienic, fire-retardant, dust-proof qualities, and the exceptional low cost of maintaining in a clean condition have created for the Wunderlich Metal Materials a reputation of being the most economical and satisfactory covering for walls and ceilings; a fact that will be fully appreciated by all those looking for maximum results in return for moderate outlay.

See page 47 for instructions as to measurements required when ordering ceilings to design.

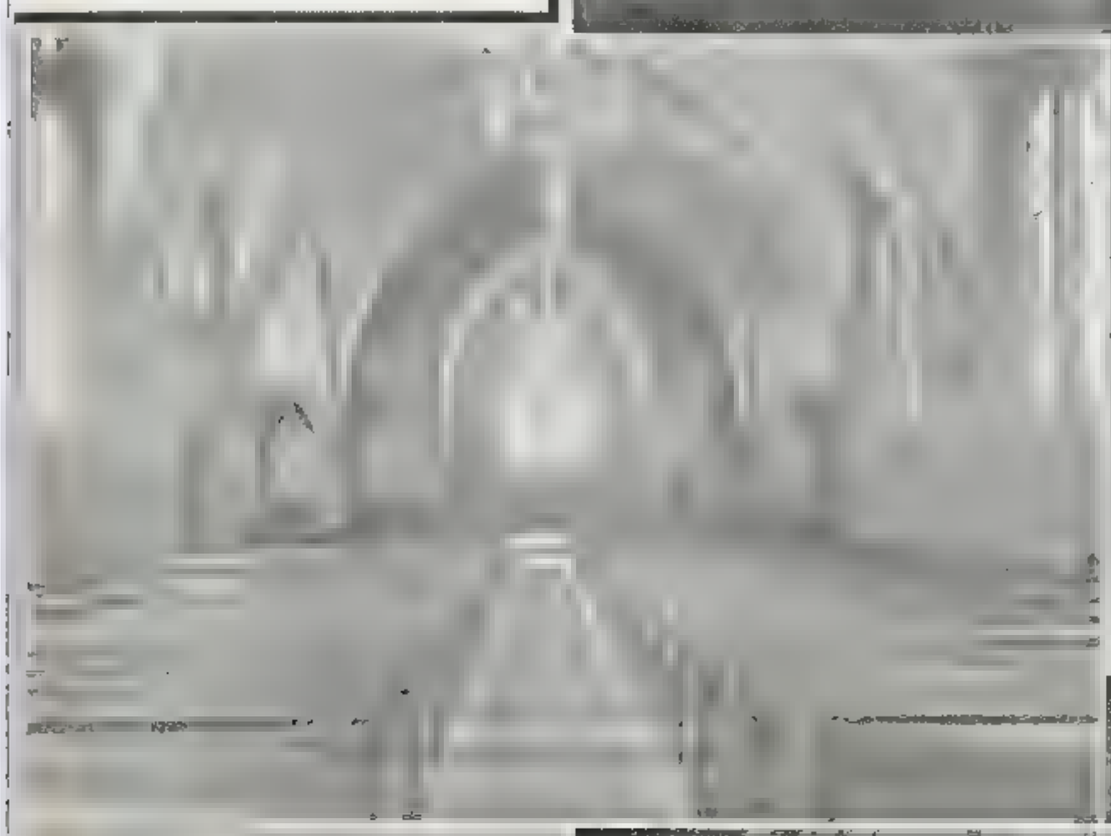
Cinema Theatres.

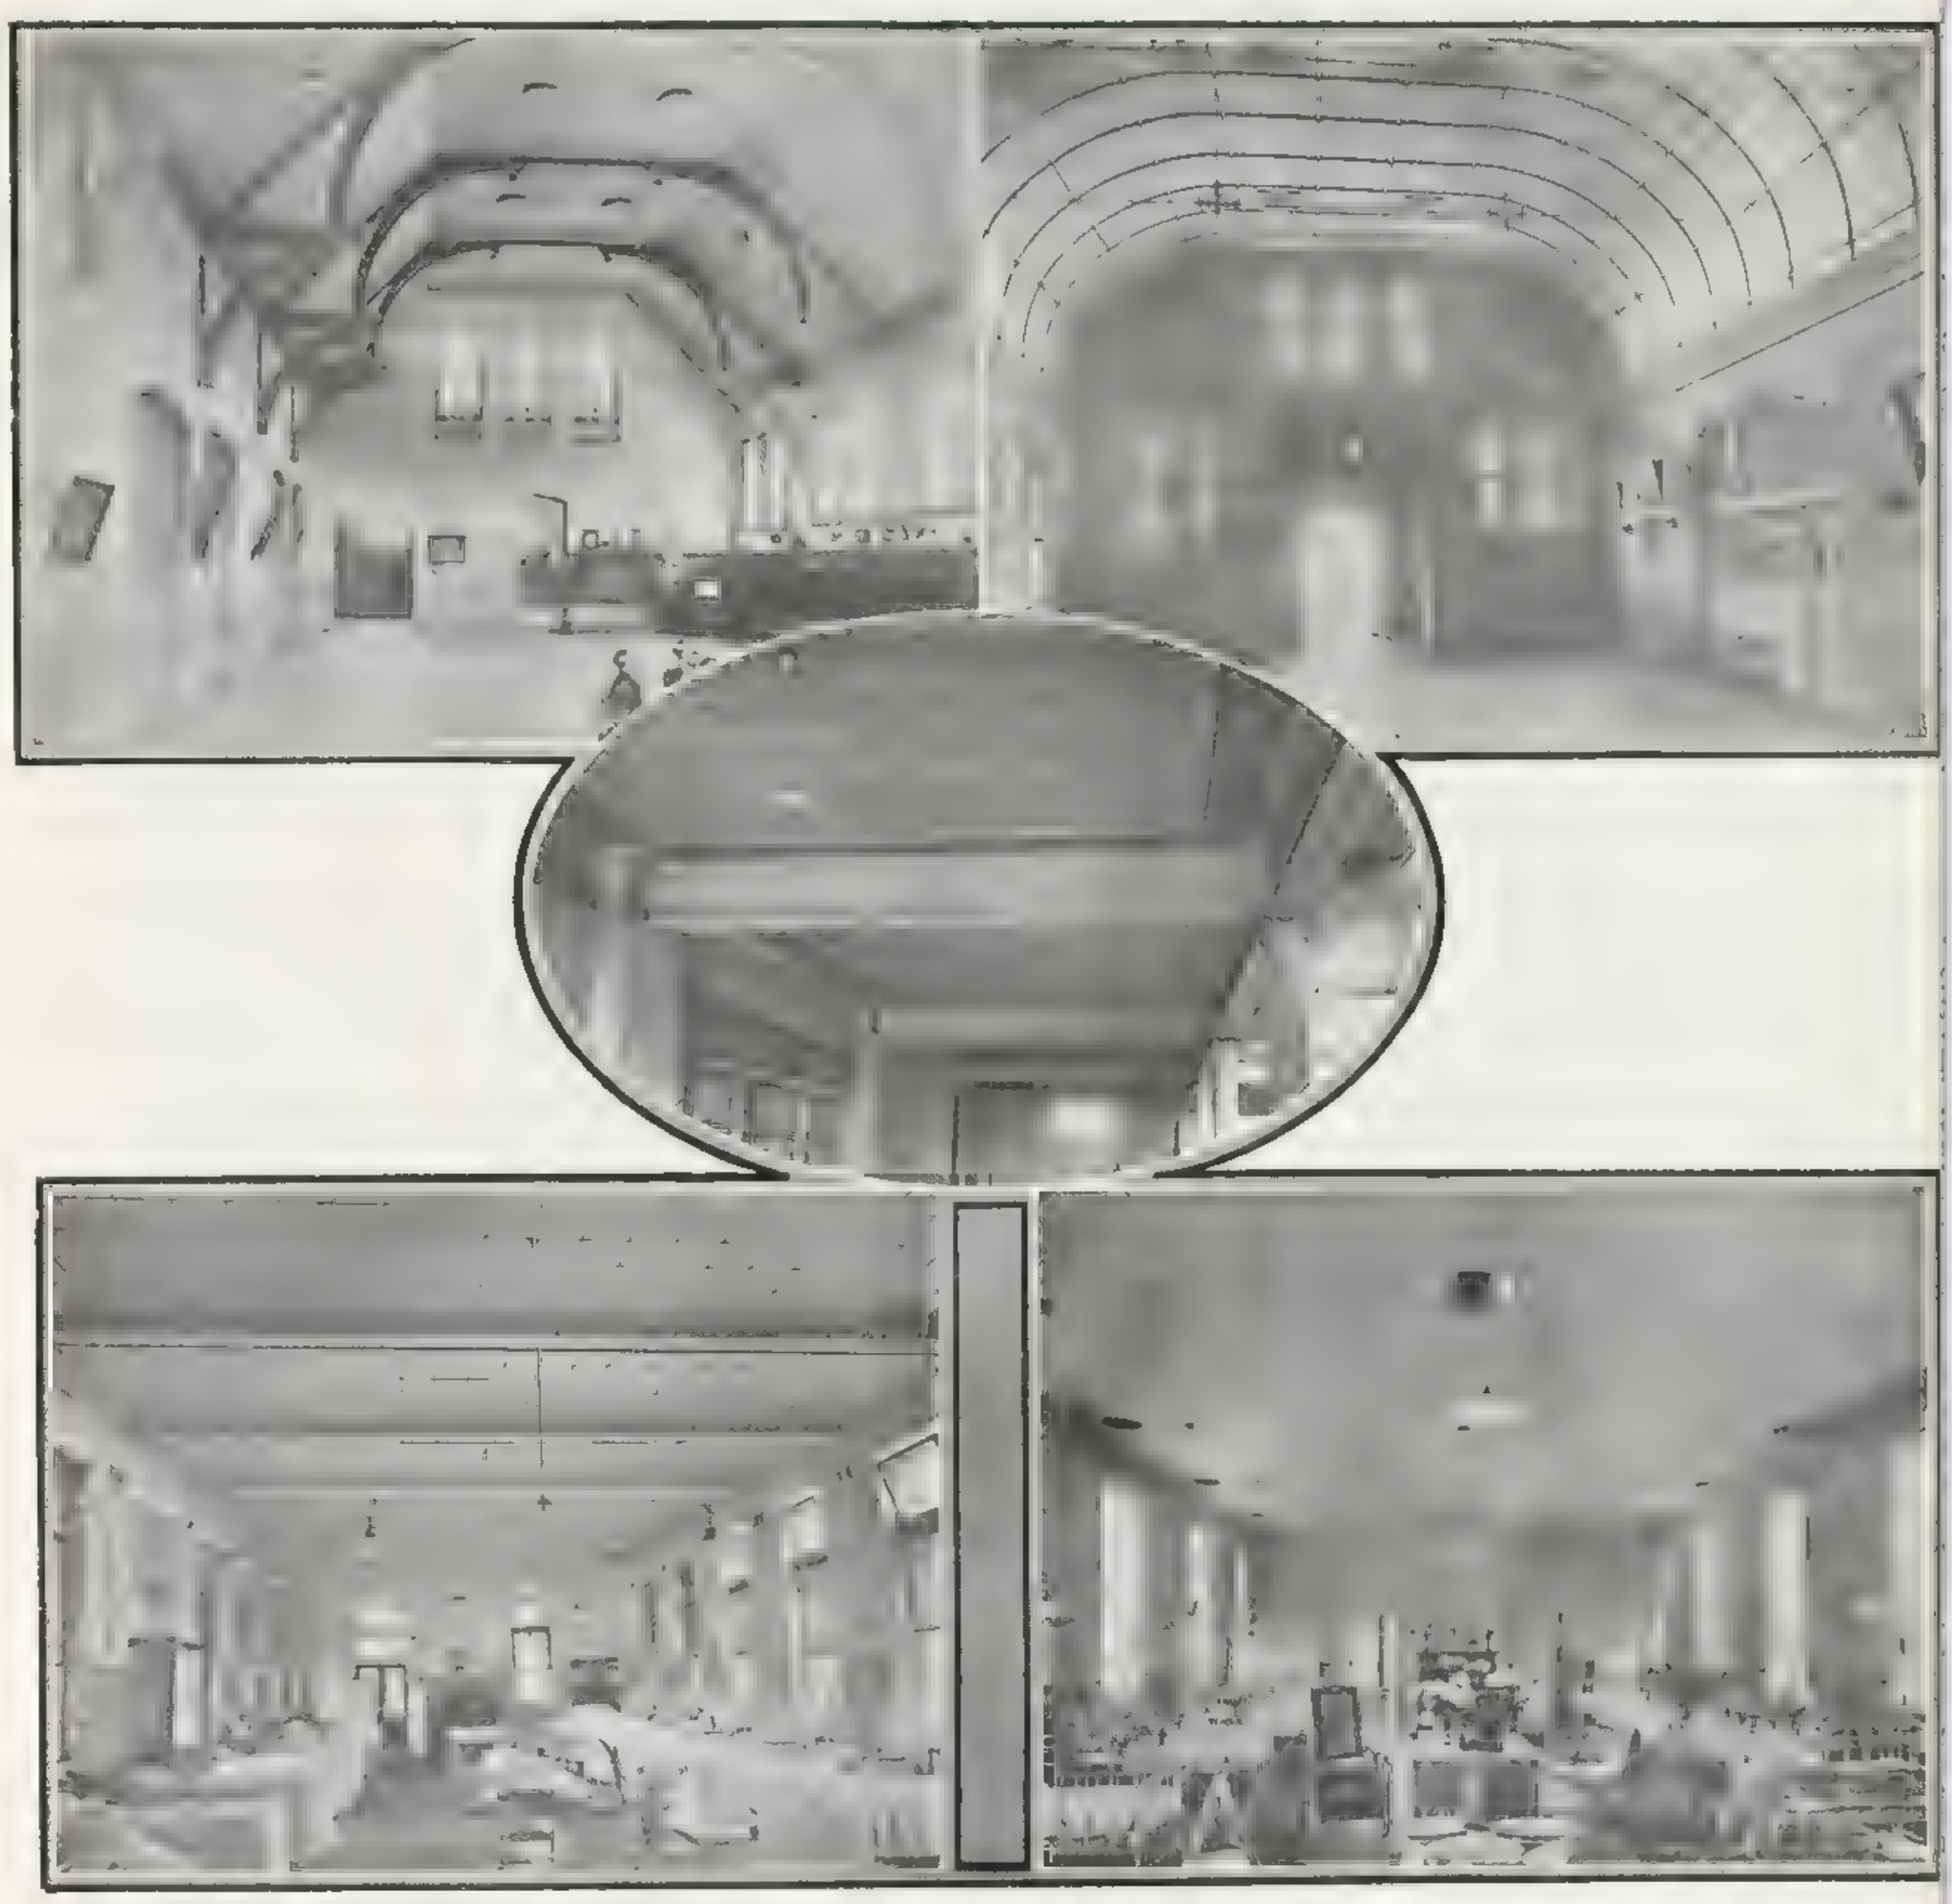
Wunderlich Metal Installations for Ceilings,
Proscenium Moldings, Dado and Balcony Fronts.

The hygienic and acoustic properties of Wunderlich Ceilings have been highly eulogised by leading Artists and Singers.



Churches.

Wunderlich Ceilings can be supplied to harmonise both in character and design with the buildings in which they are to be installed. Appreciated by Architects and Owners for their durability and acoustic qualities.



Schools and Hospitals.

Wunderlich Ceilings produce an effect which is noticed, though they in themselves remain subdued and unobtrusive. Metal Ceilings are durable and hygienic while their acoustic properties are perfect.

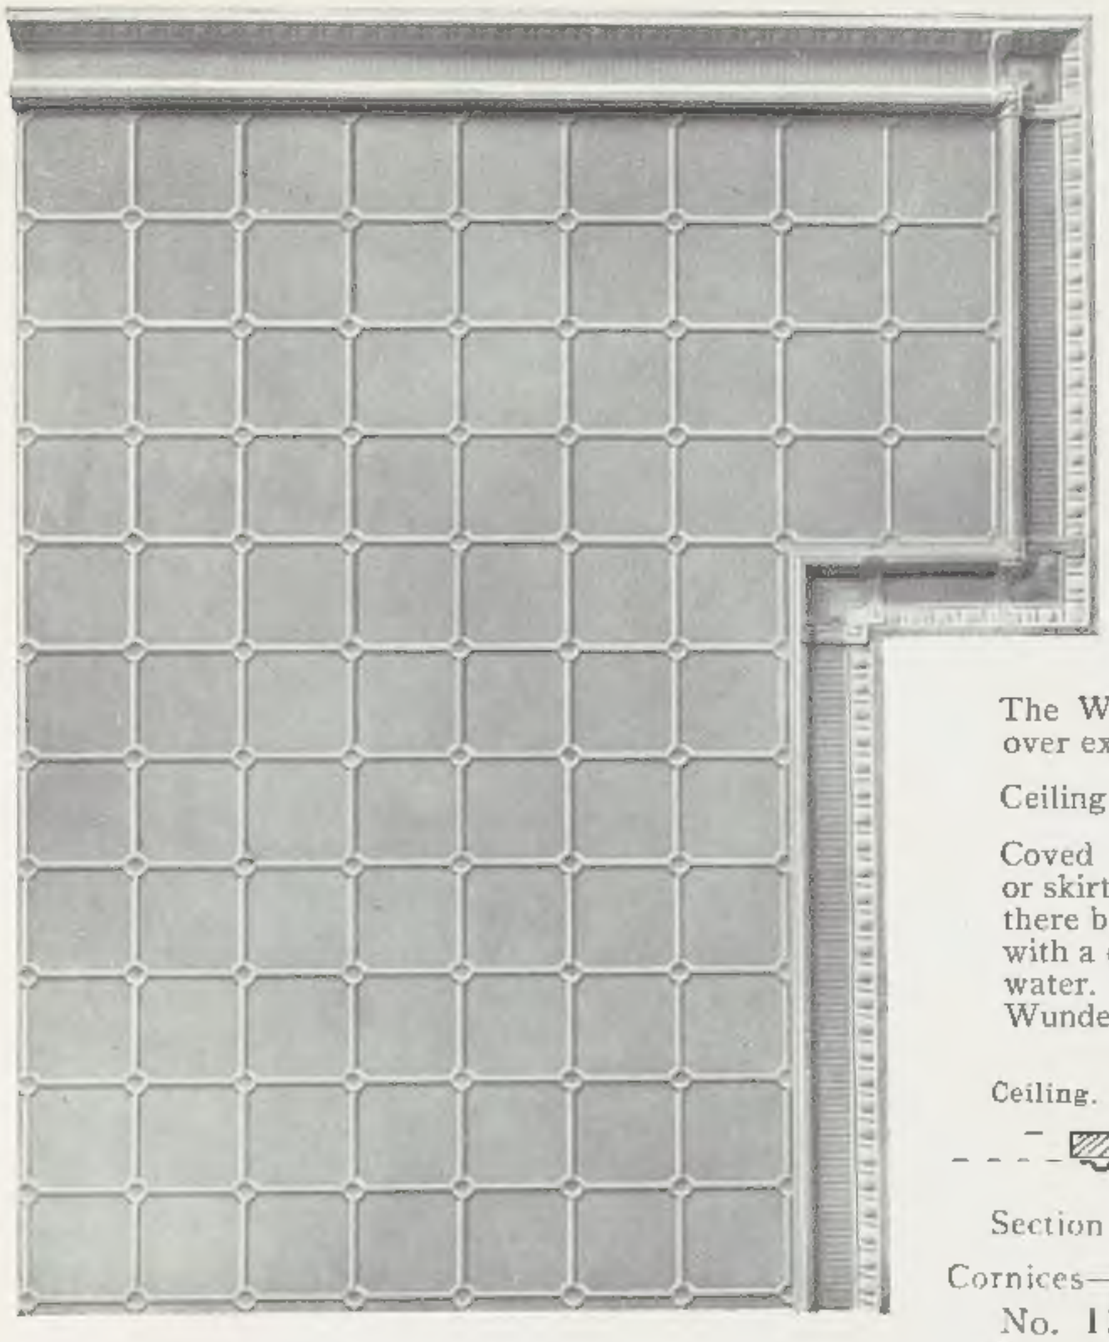
Diaper Sheeting No. 1533 (sheets 6ft. x 2ft. pattern 24in.). Cornice Border No. 1312.



No. 150. Steel Sheeting, 6in. pattern.

Hospital Ceilings

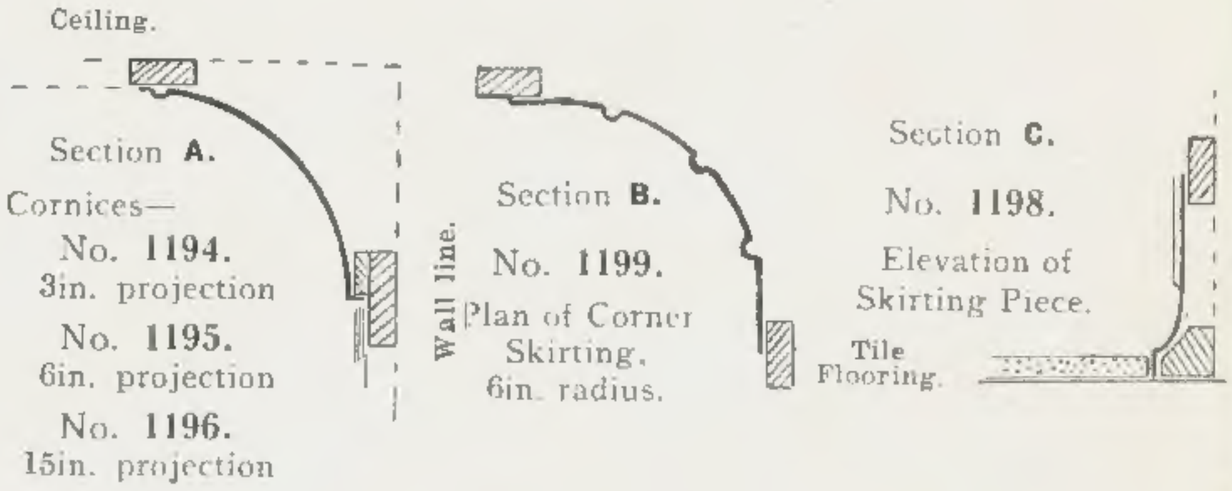
Wunderlich Embossed Metal Ceilings are particularly adapted for the requirements of Hospitals, Schools, and Public Institutions. Supplied in Steel (painted) or Galvanised Steel.

Methods of Fixing.

The Wunderlich Materials can be fixed to a frame building on battens or over existing brick or stone walls by plugging and battening same.

Ceiling and Wall sheets are made in stock sizes of 6ft. x 2ft.

Coved Cornices as illustrated (Section A), are made in three sizes: the base or skirting piece (Section C) forms a clean curved finish from wall on to floor, there being no crevice ledge or angle for the accumulation of dust. Finished with a coat of enamel paint the surface can be cleaned down with soap and water. Affording no harbor for germs or dust, a bathroom so lined with Wunderlich Materials may always be kept sweet and clean.



Measurement of Ceiling

To secure accuracy in the execution of orders and in the preparation of estimates, a rough sketch of the room should show :—

A — All measurements which should include projection and recesses in walls at ceiling level, a diagonal measurement is required when room is not rectangular.

Depth and width of beams, if any, position ot lighting points and ventilators.

Difference in level of bay and main ceiling, distance between top of windows and the ceiling, this will determine size tor depth of cornice. The way the joists run.

If there are existing ceilings to be covered, state the nature and condition ; plaster or wood.

It helps us to knows for what purpose the room is to be used.

With ceiling materials supplied to design we always forward working drawings. Battens are not included in our price for ceilings, but we supply them when ordered at current rates.
